Lab 4: Prototyping a Network

Objective:

Prototype a network using Packet Tracer

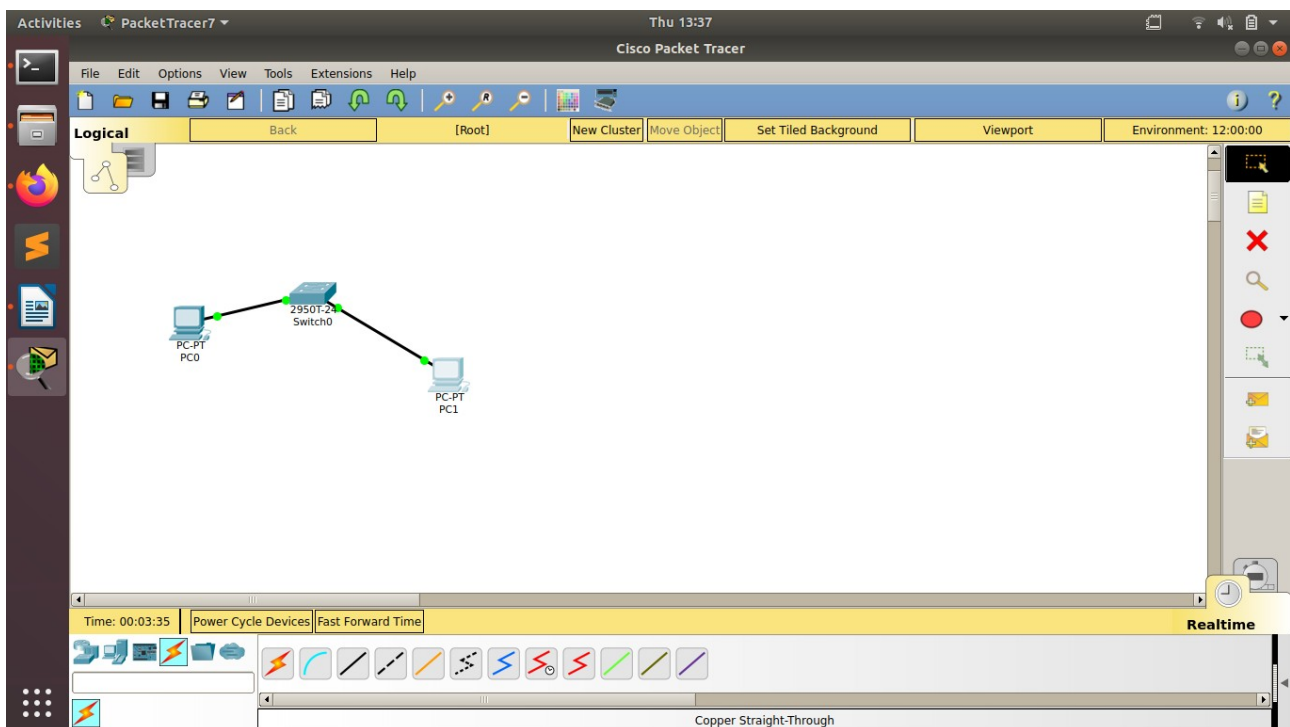

Background

A client has requested that you set up a simple network with two PCs connected to a switch. Verify that the hardware, along with the given configurations, meet the requirements of the client.

Step 1: Set up the network topology

- Add two PCs and a Cisco 2950T switch
- Using straight-through cables, connect **PC0** to interface **Fa0/1** on **Switch0** and **PC1** to interface **Fa0/2** on **Switch0**.

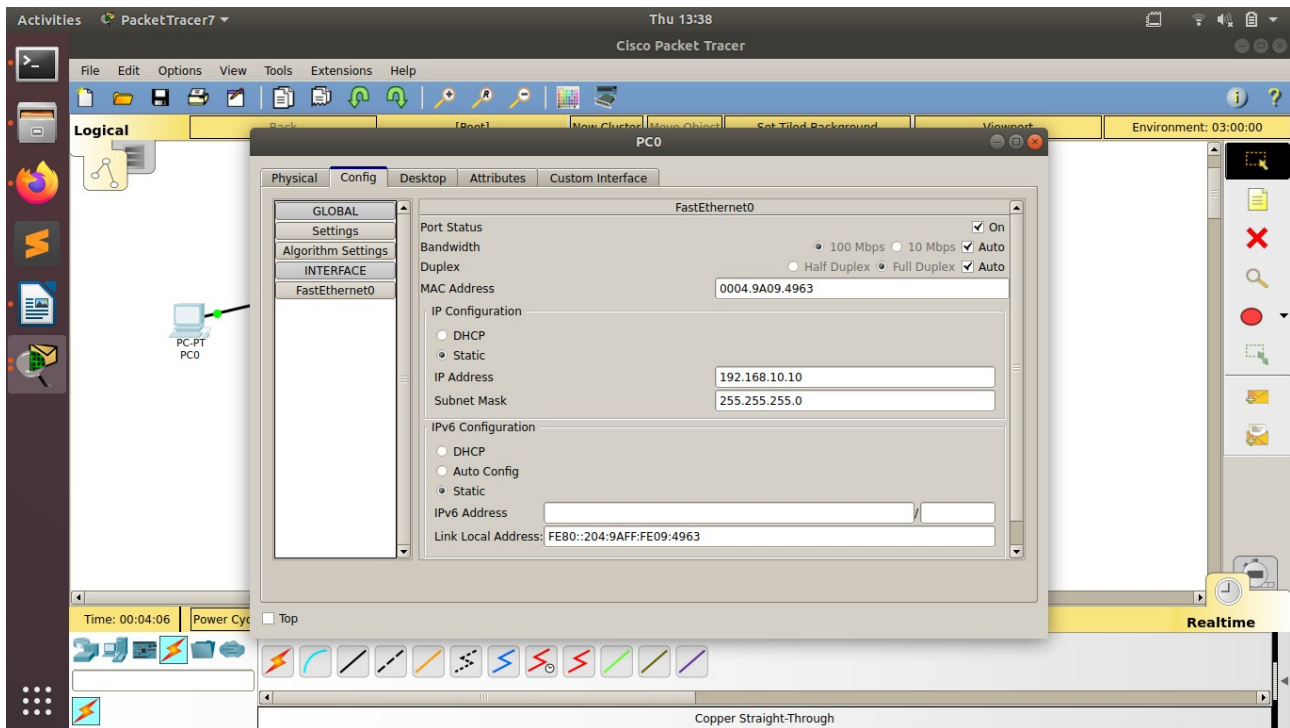

Fig4.1 Shows 2 PC's i.e. PC-1 and PC-2 connected to switch via copper straight-cable

- Configure PC0 using the **Config** tab in the PC0 configuration window:

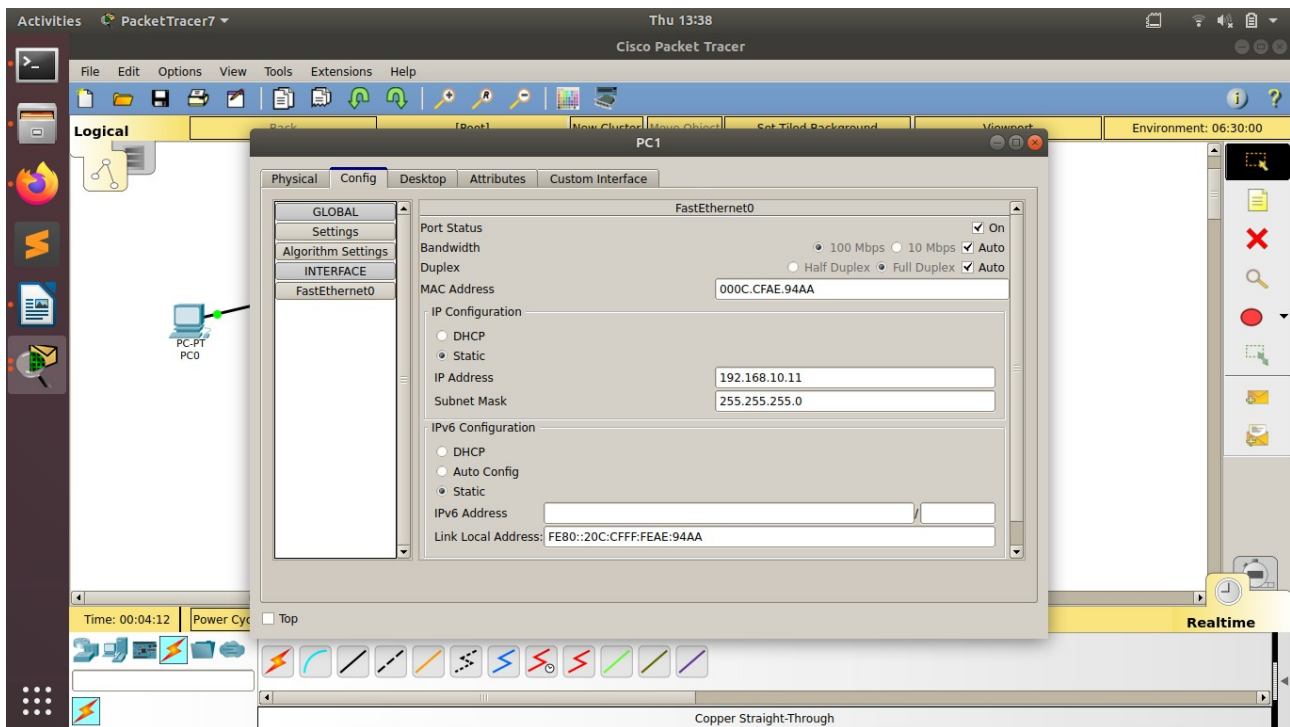

- a. IP address: 192.168.10.10
- b. Subnet Mask 255.255.255.0

Fig 4.2 Config tab of PC-0 with fast ethernet settings. The ip address and subnet mask have been added as 192.168.10.10 and 255.255.255.0 respectively

- d) Configure PC1 using the **Config** tab in the PC1 configuration window
 - a. IP address: 192.168.10.11
 - b. Subnet Mask 255.255.255.0

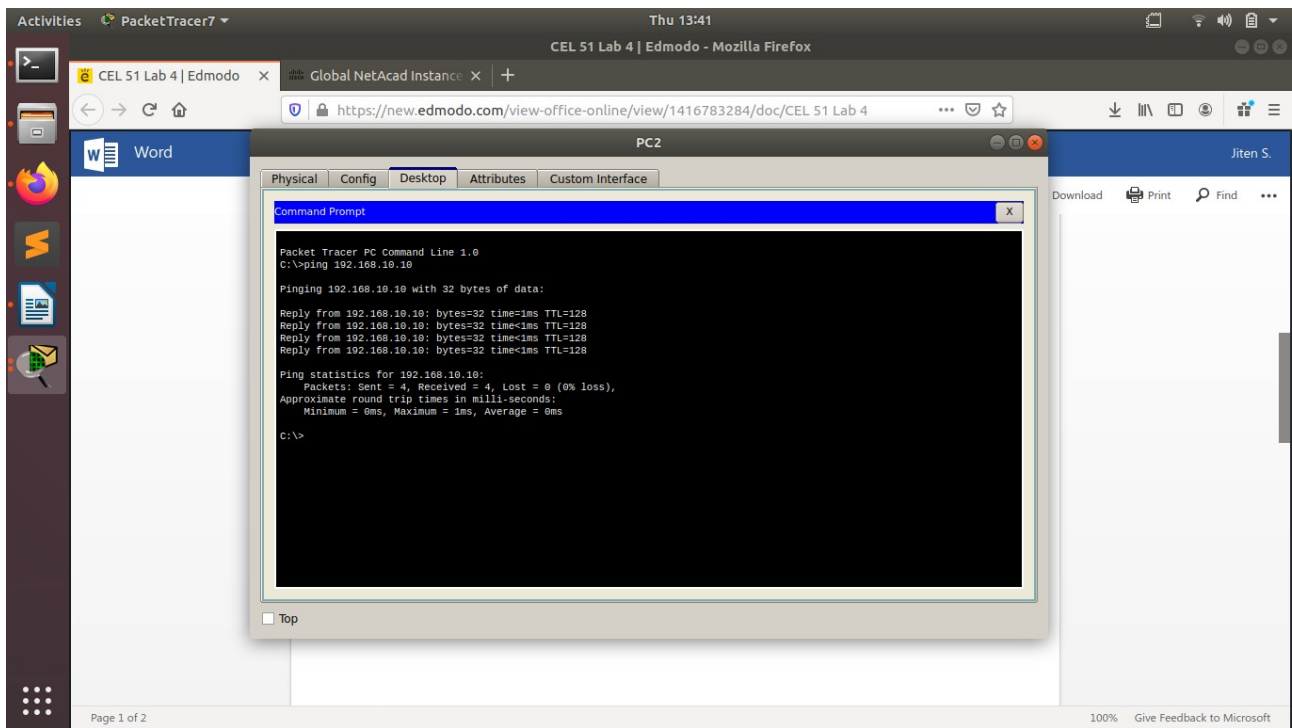

Fig 4.3 shows the config tab of PC-1 with fast ethernet settings. The ip address and subnet mask have been added as 192.168.10.11 and 255.255.255.0 respectively

Step 2: Test connectivity from PC0 to PC1

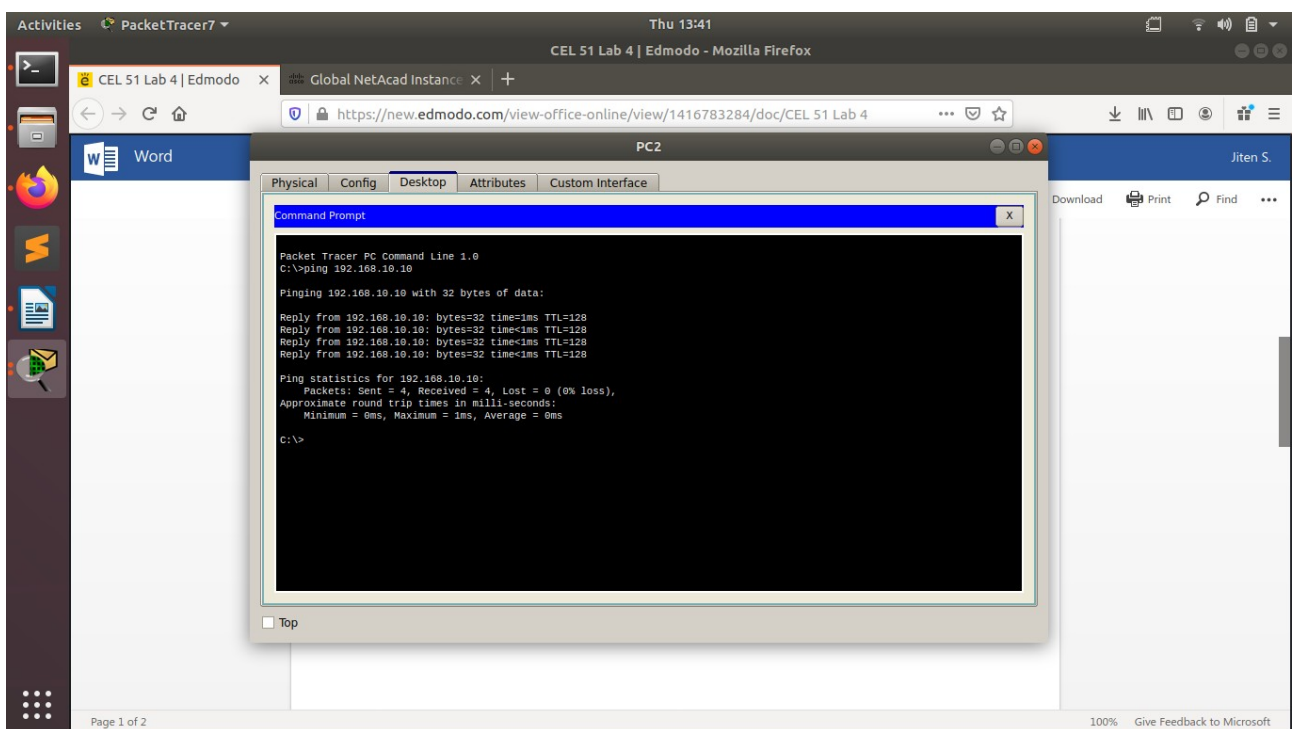

- a) Use the **ping** command to test connectivity.
 - a. Click PC0.
 - b. Choose the **Desktop** tab
 - c. Choose **Command Prompt**.
 - d. Type: **ping 192.168.10.11** and press **enter**.

Fig 4.4 Shows the ping command on ip address 192.168.10.11

- b) A successful **ping** indicates the network was configured correctly and the prototype validates the hardware and software configurations. A successful ping should resemble the below output:

Fig 4.5 : Ouput of ping command

- c) Close the configuration window.
d) Click the **Check Results** button at the bottom of the instruction window to check your work..

Lab 4.1: Basic configuration - hostname, motd banner, passwd etc

Objective:

This lab will test your ability to configure basic settings such as hostname, motd banner, encrypted passwords, and terminal options on a Packet Tracer 6.2 simulated Cisco Catalyst switch.

1. Use the local laptop connect to the switch console.

Fig 4.1.1 Shows 2 Laptops ,Remote Laptop connected to router via copper cross-over wire ,Local Laptop connected to Switch via console and router is connected to switch via copper straight wire

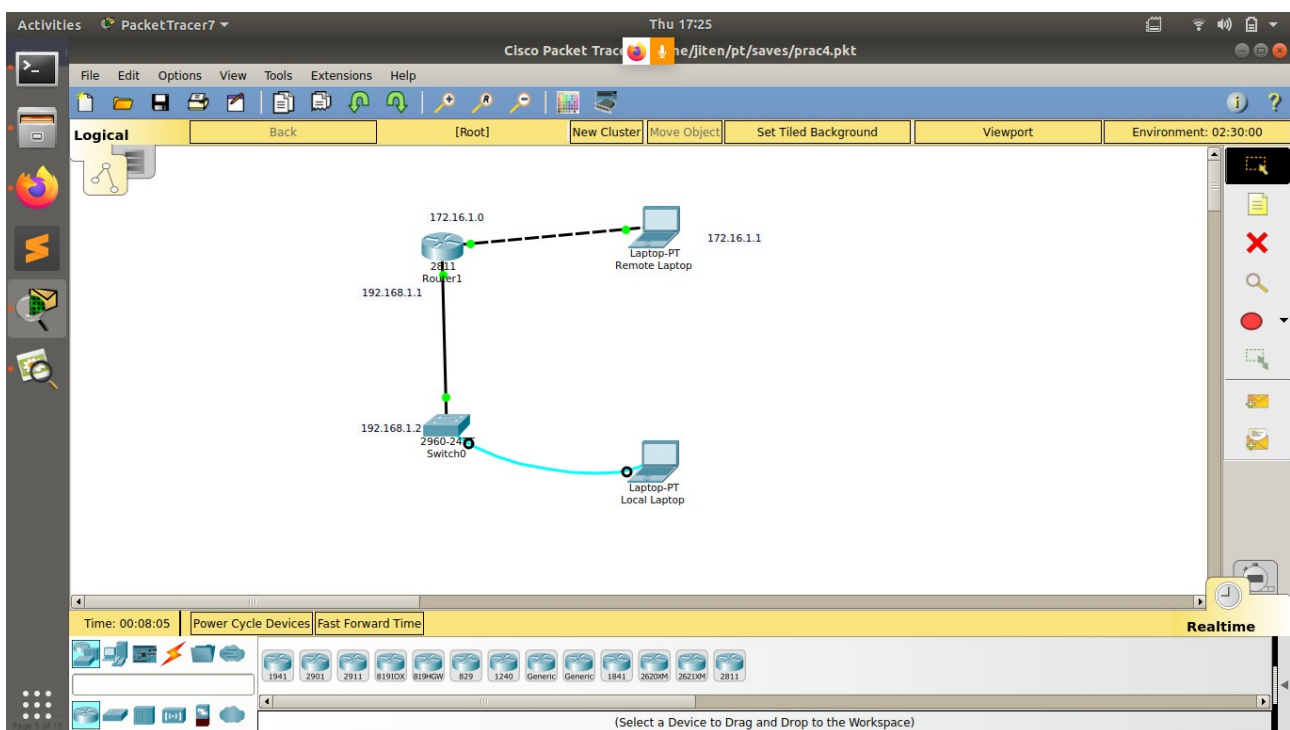

Fig 4.1.2 Shows the config tab of Remote Laptop

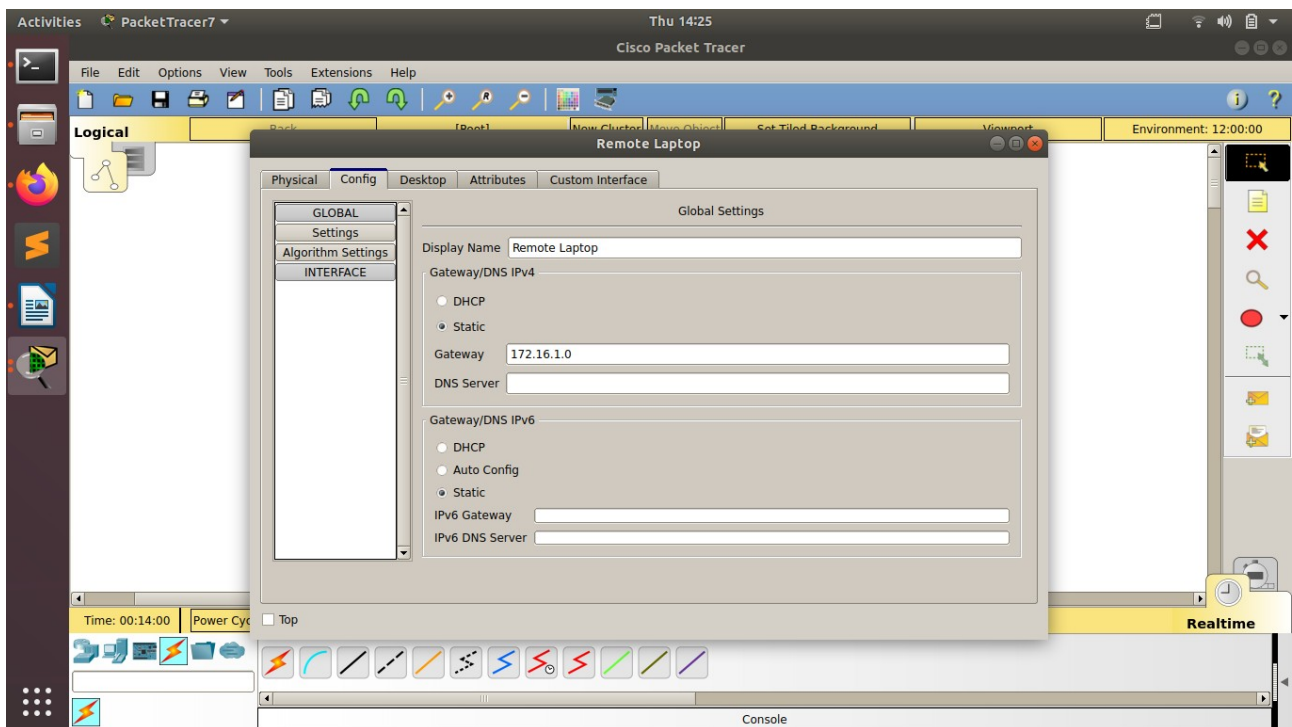

Fig 4.1.3 Shows the details of Remote Laptop

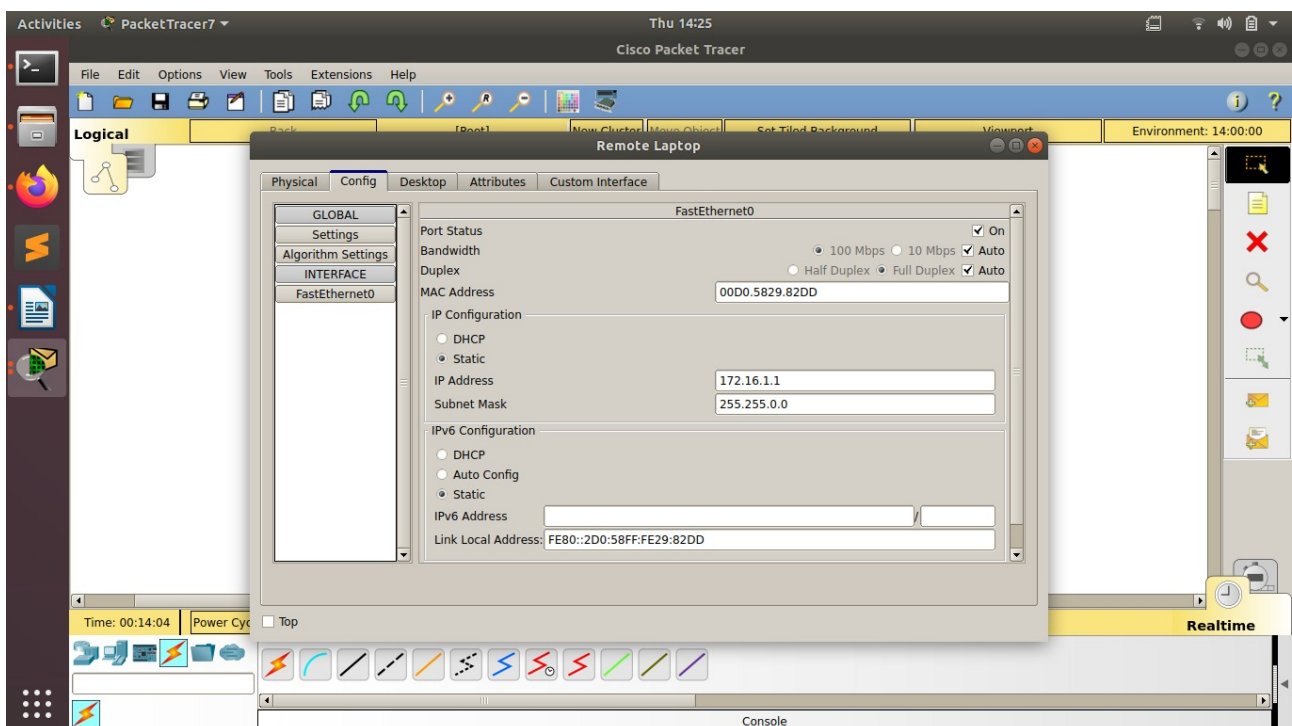

Fig 4.1.4 Shows the config tab of Local Laptop

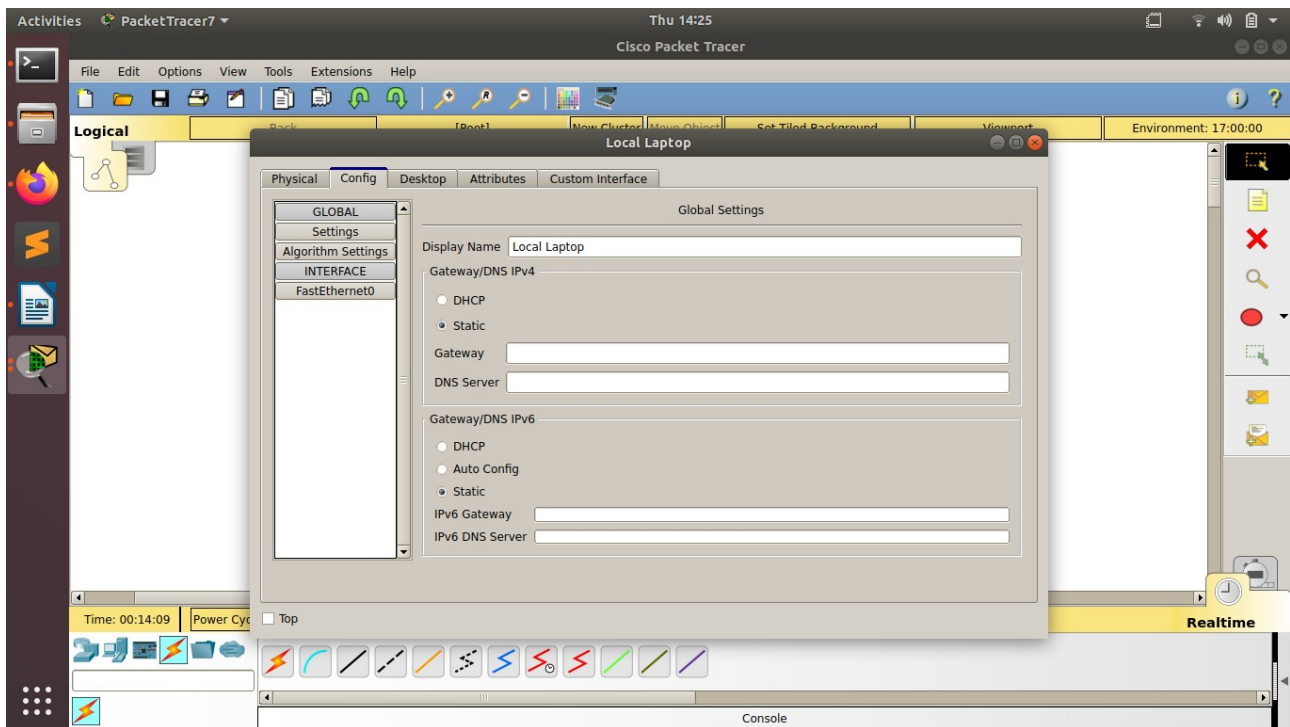

Fig 4.1.5 Shows the Fast ethernet Settings of Router connecting the switch where we turn the Port Status to ON

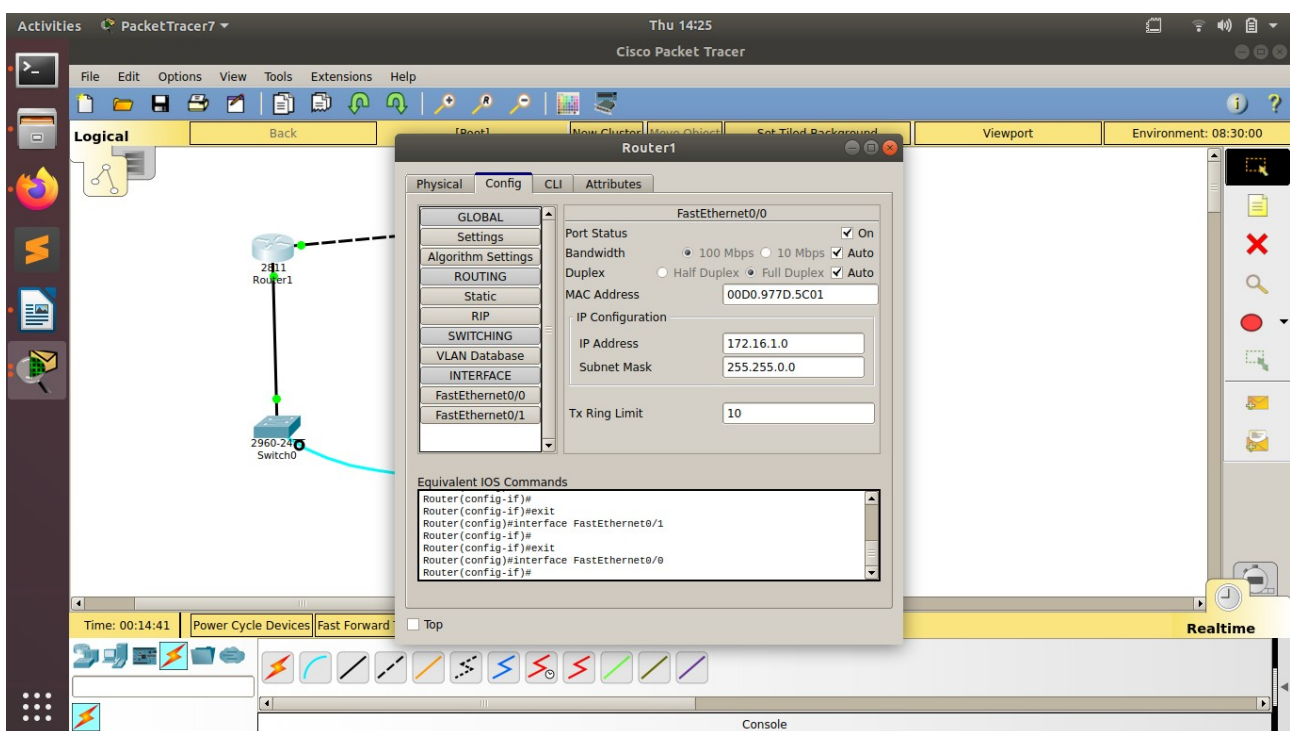

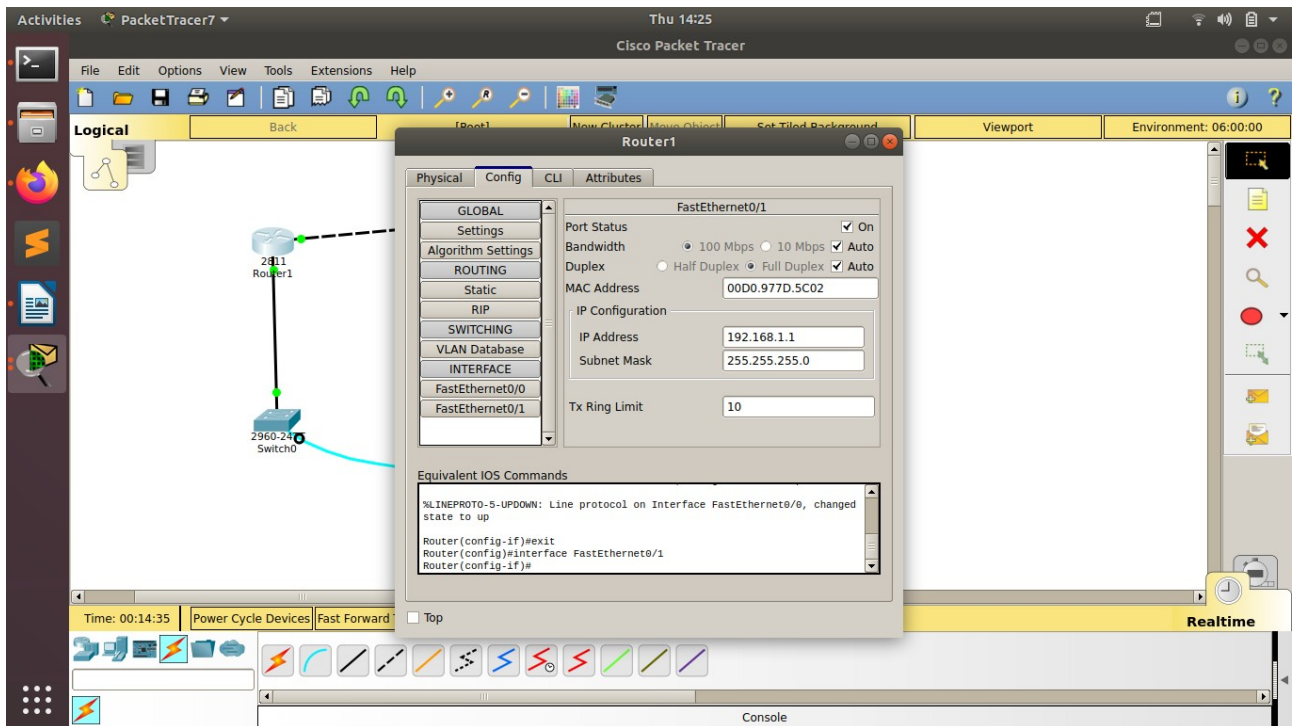

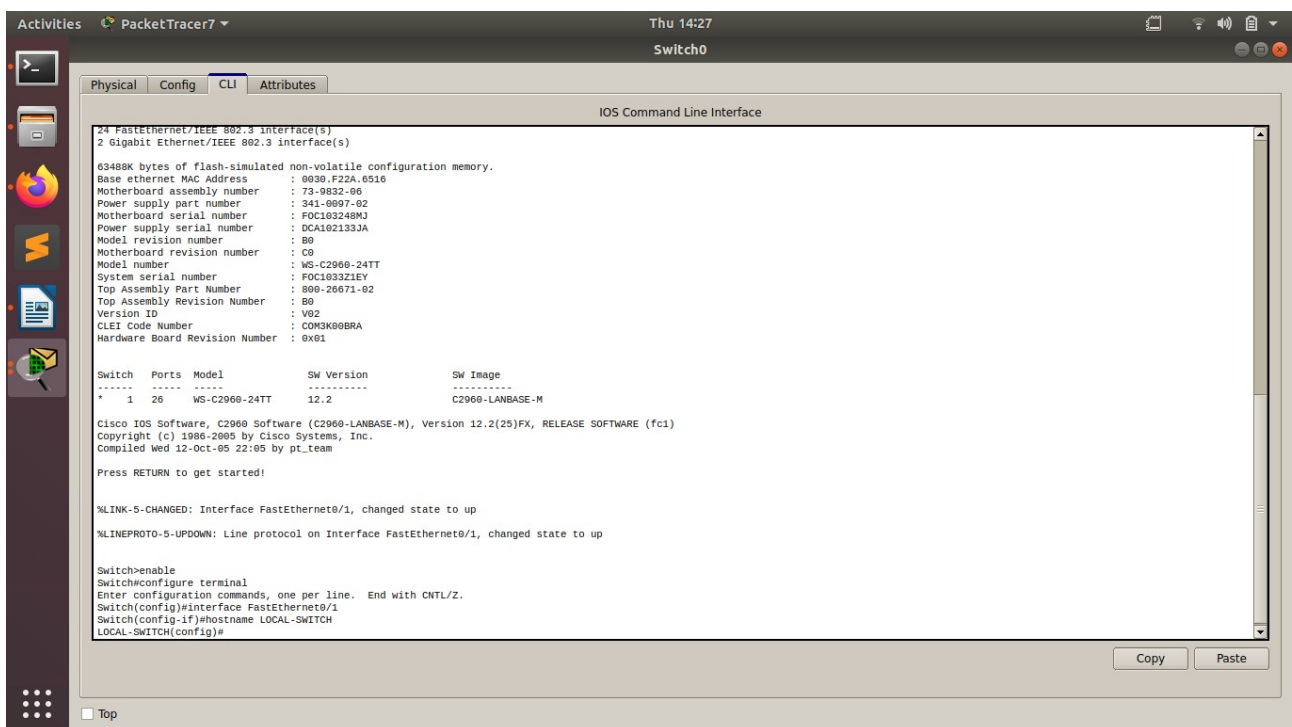

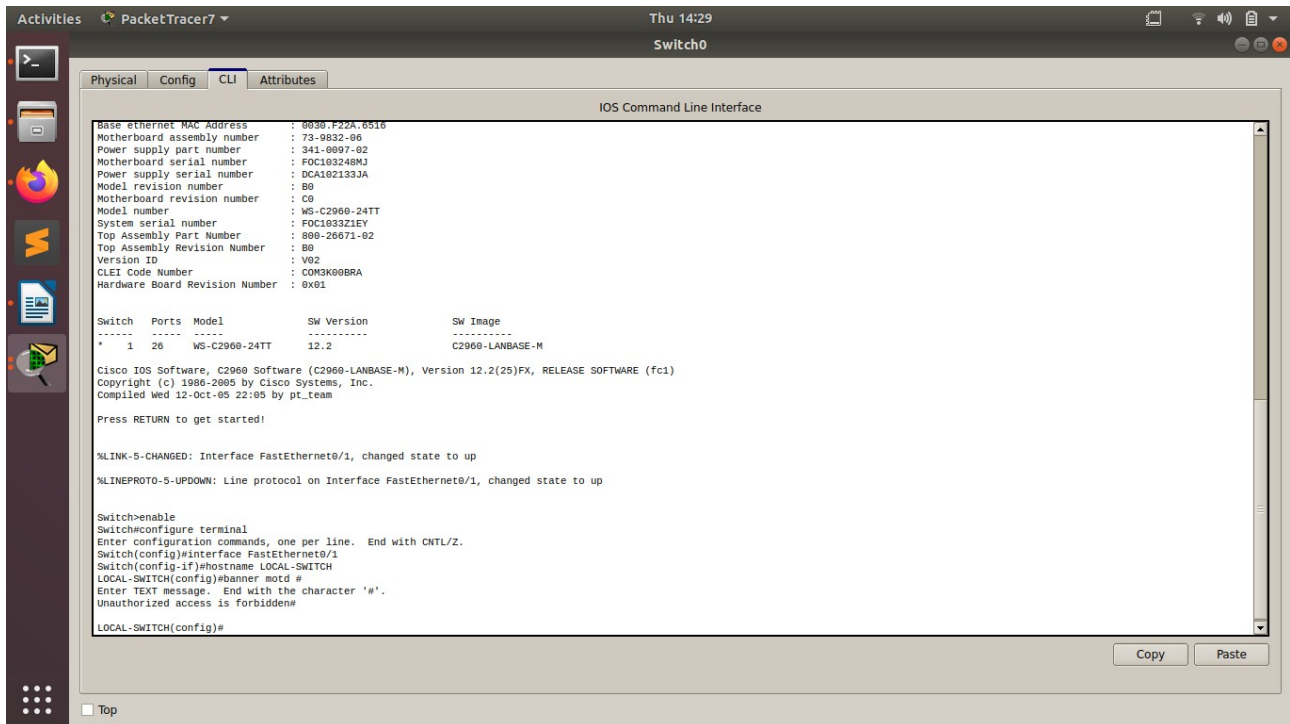

Fig 4.1.6 Shows the Fast ethernet Settings of Router connecting the remote laptop where we turn the Post Status to ON

2. Configure Switch hostname as LOCAL-SWITCH

2. Configure the message of the day as "Unauthorized access is forbidden"

3. Shows the CLI of switch to configure the message of the day as Unauthorized access is forbidden

4. Configure the password for privileged mode access as "cisco". The password must be md5 encrypted

The screenshot shows the PacketTracer7 interface with the CLI tab selected for Switch0. The command history in the terminal window is as follows:

```
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#enable secret cisco  
^  
% Invalid input detected at '^' marker.  
  
LOCAL-SWITCH#config  
Configuring from terminal, memory, or network [terminal]?  
Enter configuration commands, one per line. End with CNTL/Z.  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#enable secret cisco  
LOCAL-SWITCH(config)#
```

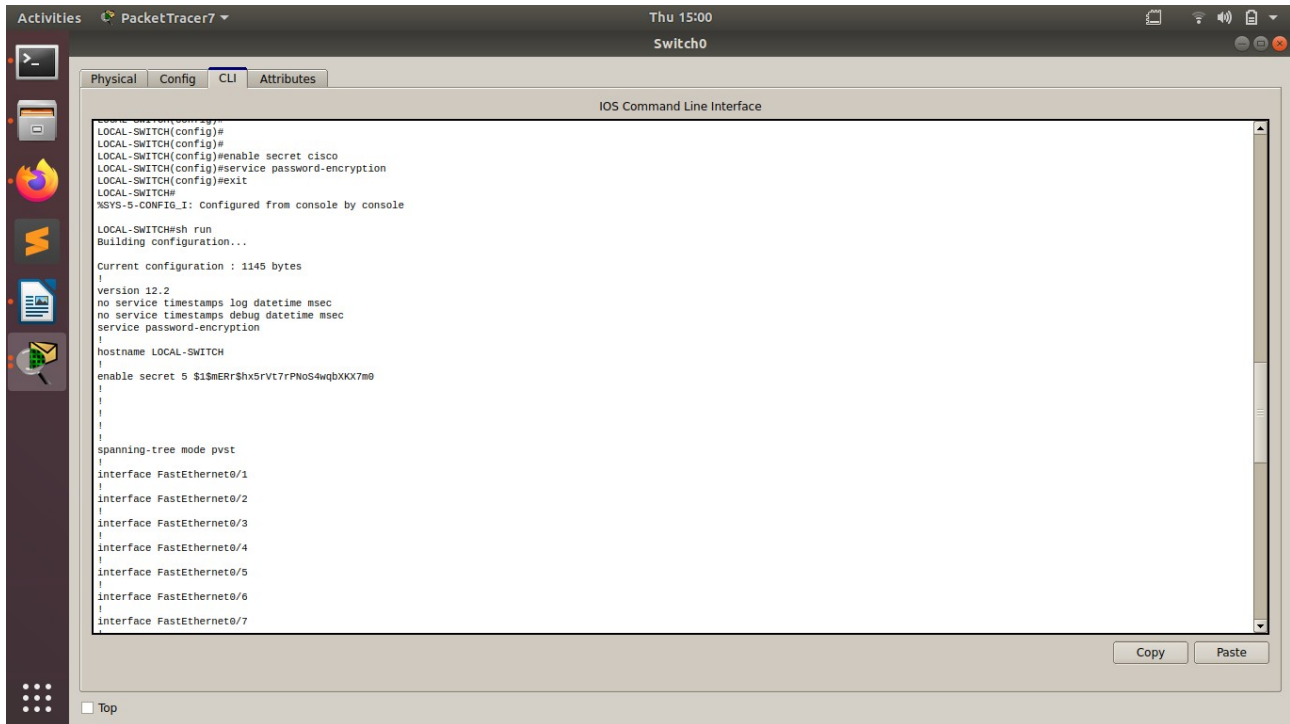

5. Configure password encryption on the switch using the global configuration command

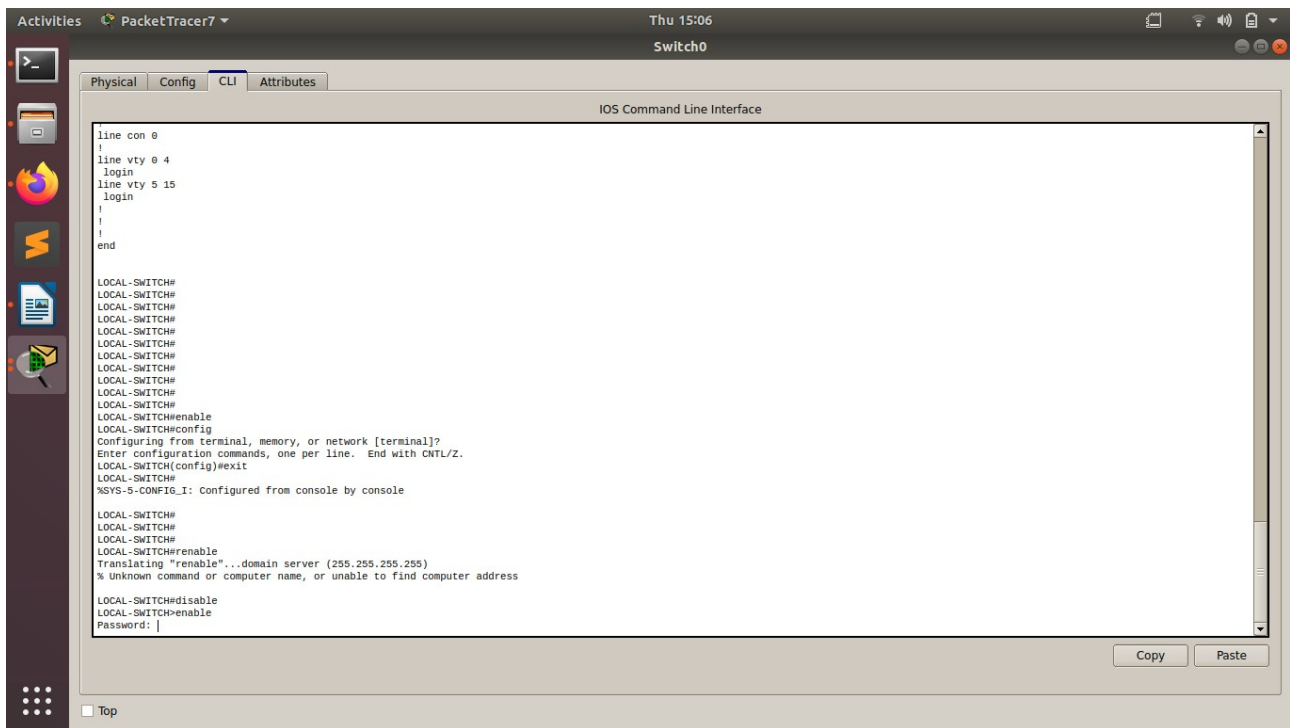

The screenshot shows the PacketTracer7 interface with the CLI tab selected for Switch0. The command history in the terminal window is as follows:

```
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#  
LOCAL-SWITCH#enable secret cisco  
^  
% Invalid input detected at '^' marker.  
  
LOCAL-SWITCH#config  
Configuring from terminal, memory, or network [terminal]?  
Enter configuration commands, one per line. End with CNTL/Z.  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#  
LOCAL-SWITCH(config)#enable secret cisco  
LOCAL-SWITCH(config)#service password-encryption  
LOCAL-SWITCH(config)#
```

6 .Fig 4.1.12 Shows the encrypted password when I use the show run command

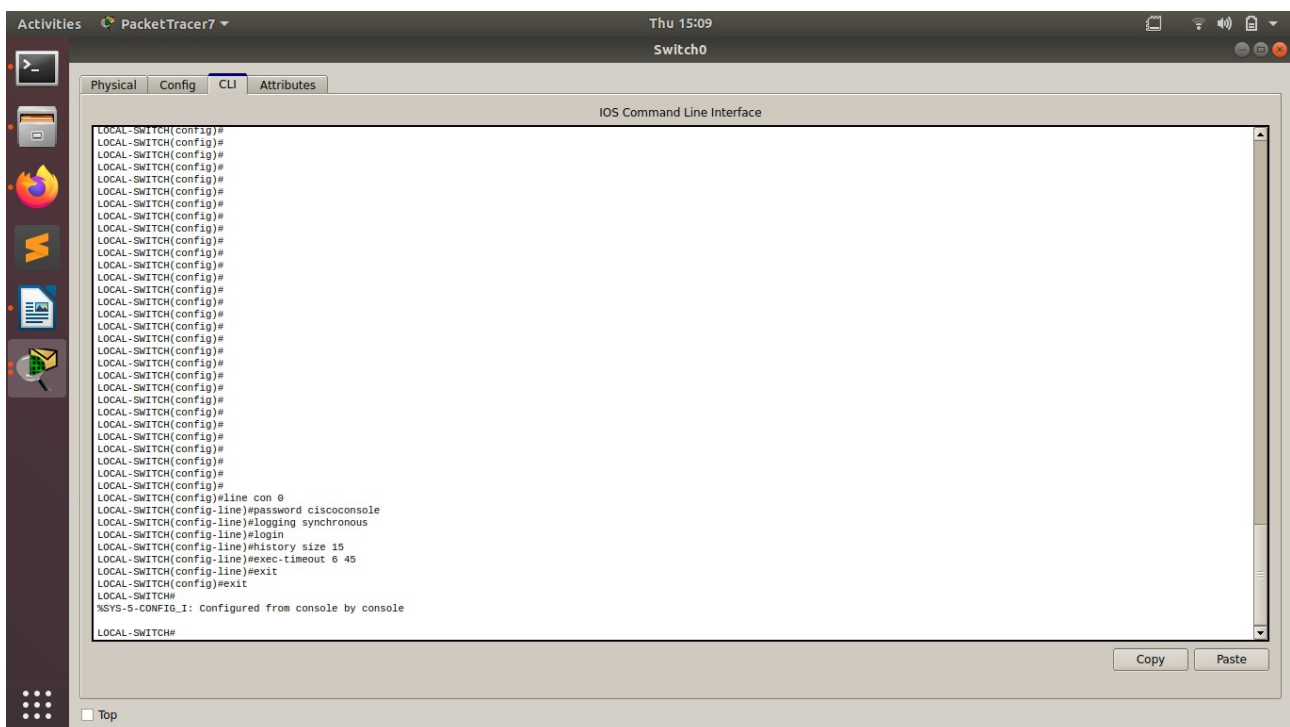

7. Shows that the CLI asks for password when I try to go to privileged mode

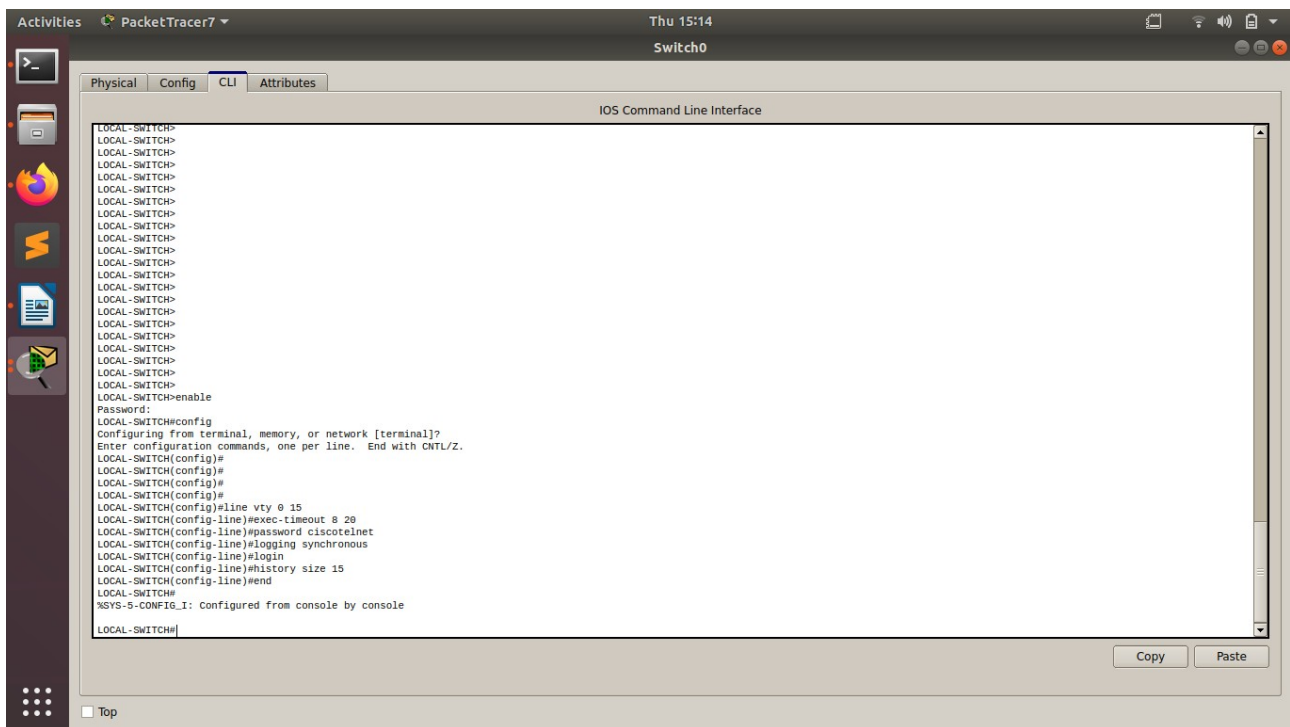

8. Configure **CONSOLE** access with the following settings :

- Login enabled
- Password : whatever you like
- History size : 15 commands
- Timeout : 6'45"
- Synchronous logging

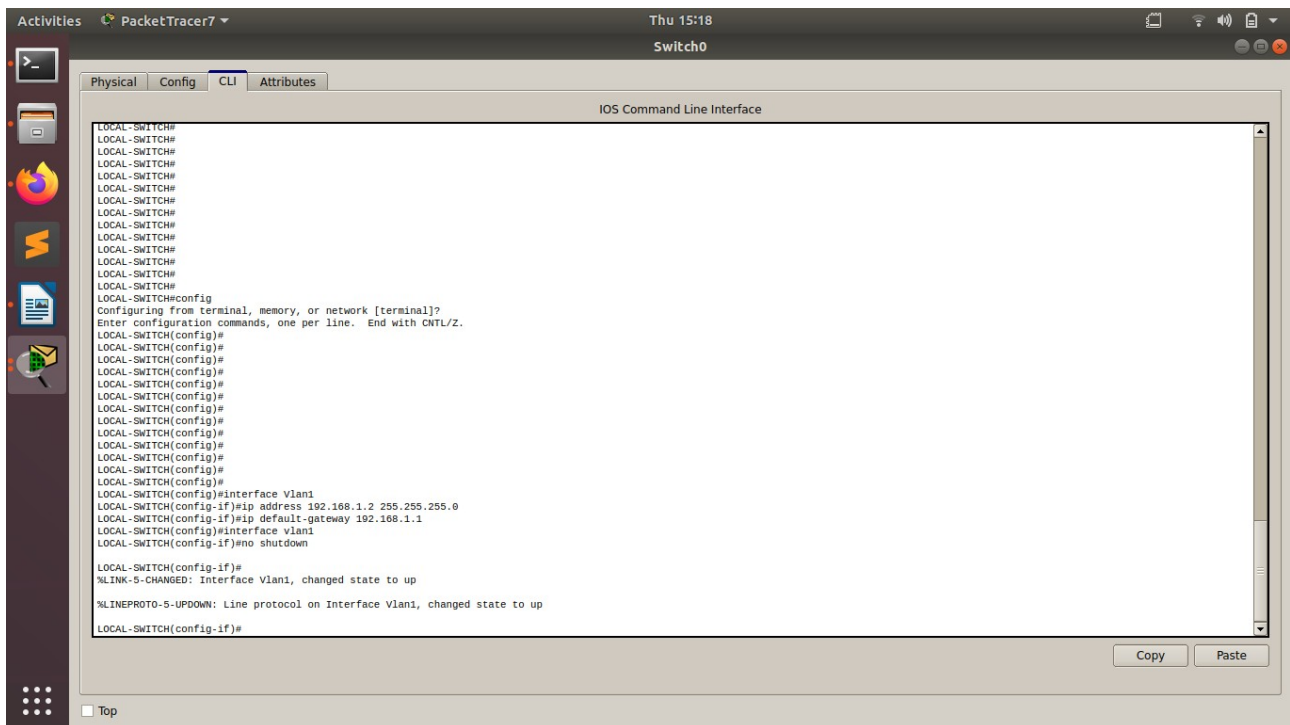

9. Configure TELNET access with the following settings :

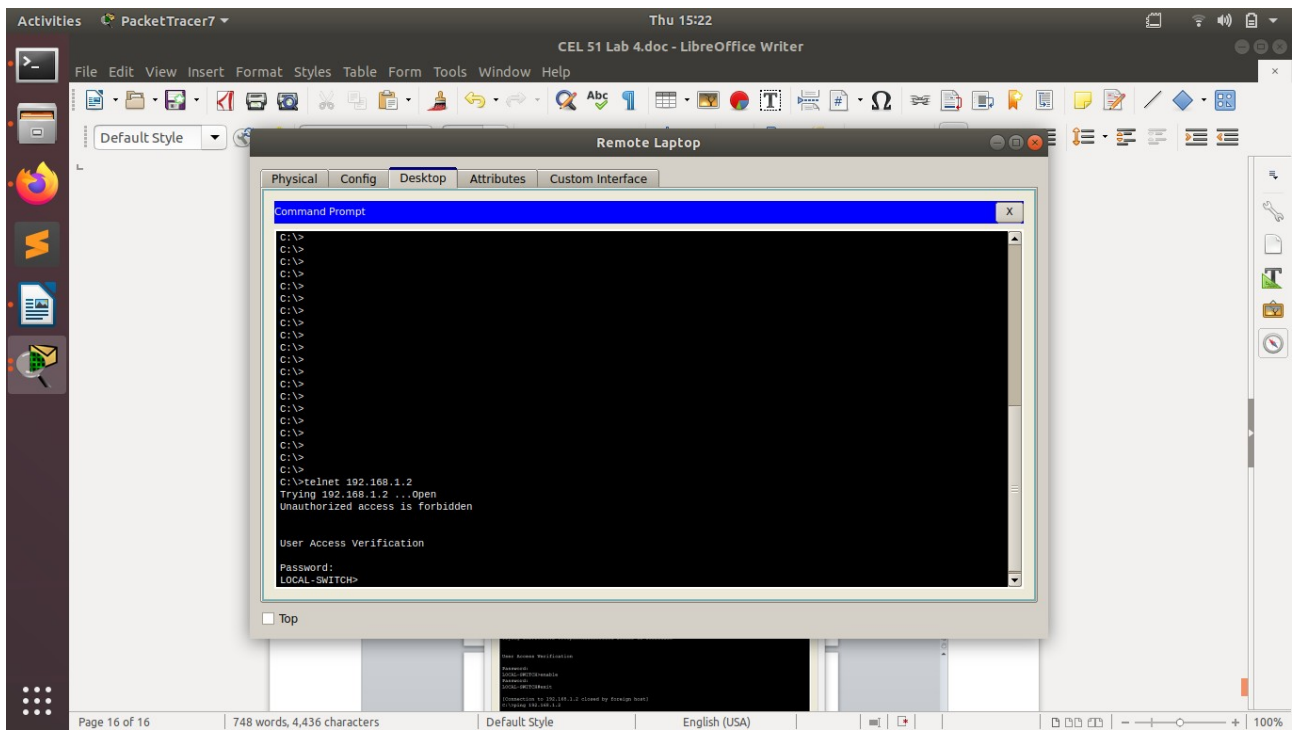

- Login enabled
- Password : whatever you like
- History size : 15 commands
- Timeout : 8'20"
- Synchronous logging

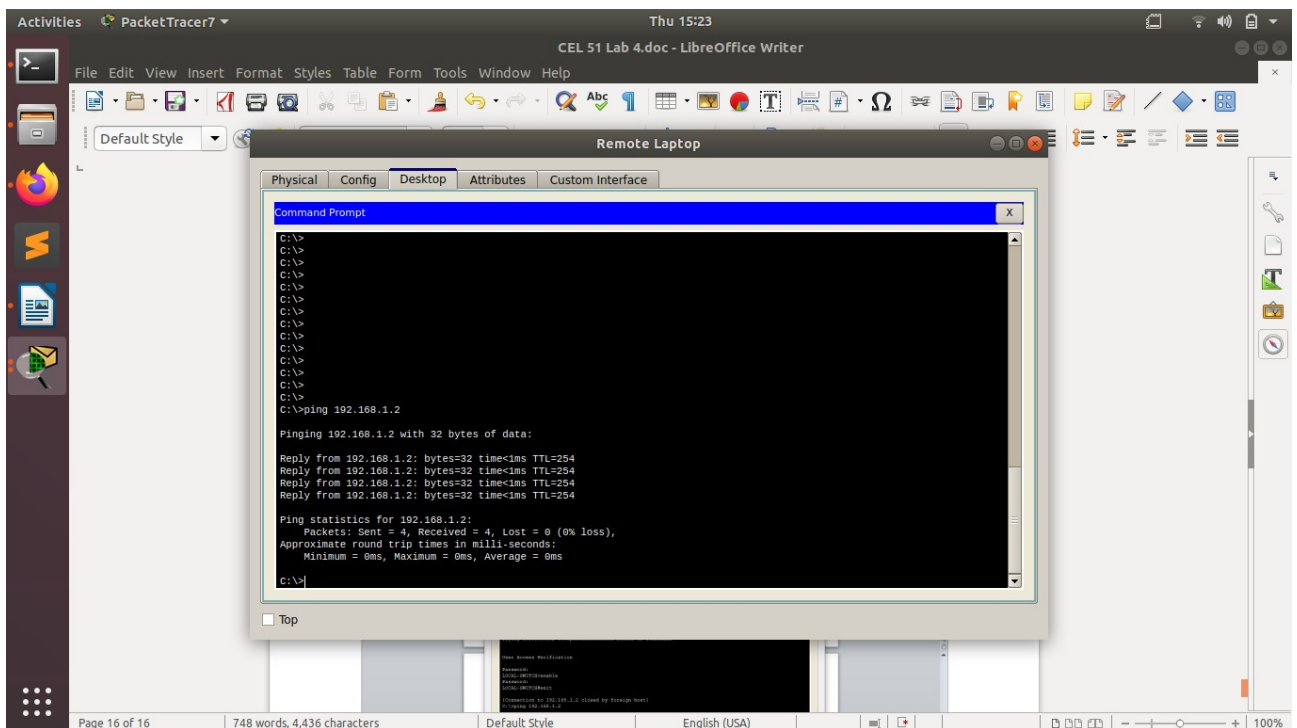

10. **Configure the IP address of the switch as 192.168.1.2/24 and it's default gateway IP (192.168.1.1).**

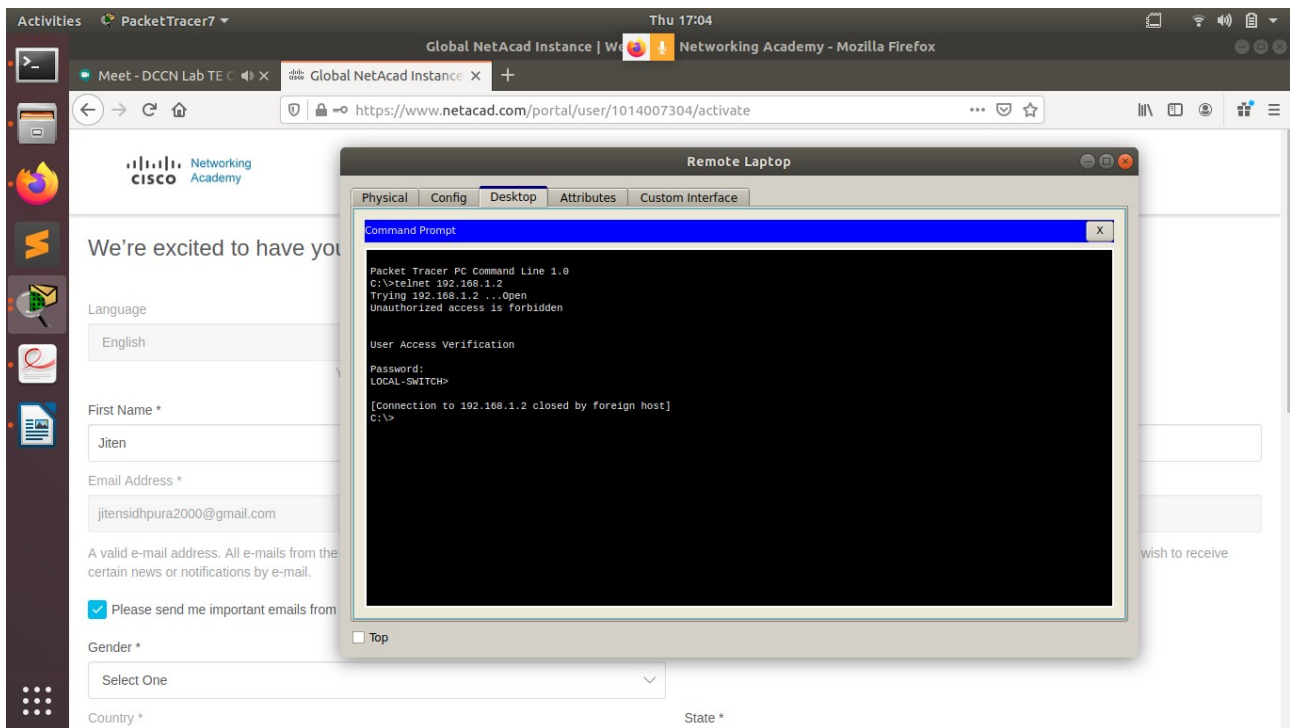

11. **Test telnet connectivity from the Remote Laptop using the telnet client.**

12. PING LOCAL LAPTOP

13. Telnet Session Expire

Conclusion :

I made changes in the switch of the network using command prompt.
